Box by Bot & Dolly

Presentation by Jiayue Yao

Box shows the interaction of a performer with the transformation environment, exploring the real space and digital animation synthesis through VJ(Visual Jockey) projection and light sculpture projection on the moving plane. It may let us to rethink the boundaries of what we consider reality.

Transformation

Levitation

Intersection

Teleportation

Escape

A swedish author used ARKit's face tracking interface and iPhone X's TrueDepth sensor make a phantom application that can turn your iPhone X become a "hole", adjust the screen display by tracking the position of your eyes. When you see the phone from different angles, the screen display different results so that the screen felt like a real hole. This app is called The Parallax View but is reviewing by apple app store.
